The World Academy of Sciences for Complex Security brings together scientists in research work and science experience generalization to support the development and practical application of global world system of science and education aimed at strengthening peace between peoples and ensuring their security.

There are Academy's representatives in the USA, Germany, Great Britain, Austria, Italy, Turkey, Israel, Poland, Bulgaria, Estonia, Byelorussia, Ukraine, Kazakhstan, Uzbekistan, Mongolia and China.

The main aims and tasks of the Academy are:

- study of the scientific problems related to managing the complex security assurance globally in economic, ecological, fire, industrial, energotechnical, man-caused, anti-terrorism, social security spheres;
- joining intellectual forces of scientists and technical experts to exchange experience, information on the research results, as well as for promoting their professional and scientific upgrading and development;
- coordination with the public authorities at preparing appropriate governmental and legislative documents aimed at strengthening and advancement of complex safety of peoples in the world;
- participation in policy making for the public and local government authorities as stipulated by the current legislation of Russia and the International Community;
- cooperation with public and state organizations both in Russia and abroad with the aim of joining efforts to solve the tasks of the Academy;

- representation of interests and protection of rights of the Academy's members;
- support and rendering practical assistance to the developers of scientific projects, mastering new technologies and their advancement to Russian and foreign markets;
- development and expertise of designs and programs, scientific-research, experimental and other works in line with the Academy's activity trends;
- development of normative and technical documents, patenting scientific projects;
- informative, scientific and technical support, publishing activity;
- participation in implementation of international, industrial and regional programs;
- training specialists of higher qualification – doctors and grand-doctors of philosophy, candidates and doctors of sciences, as well as giving the academic degree of senior lecturer, assistant professor, professor, corresponding member, full member of the Academy and other academic degrees and ranks practiced in countries of world community.

A draft Concept of complex security assurance in peacetime was elaborated by the Academy's scientists within the frames of spearhead scientific-research work and submitted to the Government of the Russian Federation.

The Academy's scientists have developed conceptual models of state regulation of complex security management in which normative, organizational, technical and financial components of security assurance are indicated. The models have also been submitted

to the Government of the Russian Federation for further elaboration of draft laws and putting them forward by the Government to the State Duma.

The Academy carries out scientific-research works to be implemented in Moscow, other regions of Russia and specific enterprises that specialize in management of complex security assurance.

“Global security” magazine established by the Academy is being prepared for publication. The main topics of the magazine include scientific problems of management of complex security and education, popularization of advanced technologies, coverage of scientific projects and research work regarding security systems and engineered features, certification and quality of produced products.

Many of full members of the Russian Academy of Sciences, the Russian Academy of Natural Sciences, the Academy of Security, Defense and Law&Order Problems Academy, International and Russian Engineering Academies, International and Russian Academies of Electrotechnical Sciences, International and European Academies of Information and many other international, European and Russian academies have been elected corresponding members of the Academy. Besides, many members of Council of Federations, deputies of the RF State Duma, managers of territorial executive and legislative authorities of RF local government, leaders of ministries and institutions, scientists of universities, academies, research and design institutes, corporations, concerns, enterprises and organizations as well as leaders of executive and legislative authorities and foreign public corporations and companies’ representatives have been elected corresponding and full members of the Academy.

Cooperation with those scientists and technical experts dealt with security problems will be very much appreciated.
